

# Welcome to SUNSET BEACH

- 1 Pedestrian Walkway
- 2 Hard Surface Connection
- 3 Bioswale
- 4 Playground
- 5 Changeroom and Washroom Facility
- 6 Mobi Mat
- 7 Shade Structure and Accessible Seating
- 8 Fallen Log Habitat
- 9 Rain Garden and Stormwater Features
- 10 Bioretention Cells
- 11 Mobi Mat
- 12 Fallen Log Habitat
- 13 Planted Bioretention Areas
- 14 Motorized Boat Launch
- 15 Non-motorized Boat Launch
- 16 Shoreline Protection Efforts

**Bioswale**  
Designed to reduce flooding by helping rainwater soak into the ground. As the water moves through the plants and soil, pollutants are filtered out, improving water quality.

3

**Fallen Log Habitats**  
Provide homes for insects, animals, and plants. They help support nature by giving them a safe place to live, hide, and find food.

8 12

**Rain Garden and Stormwater Features**  
Planted areas that collect rainwater. The soil and rocks help clean the water and hold it so it can slowly soak into the ground.

9

**Bioretention Cells**  
Store rainwater underground so the trees can use it to grow. The water slowly soaks into the soil, helping refill groundwater and reduce runoff.

10

**Planted Bioretention Areas**  
Collect rainwater runoff. The plants and soil help clean the water by removing pollution before it returns to the environment.

13

**Shoreline Protection Efforts**  
Used to prevent land along the lake from washing away due to waves and erosion. Rocks, walls, and plants to help keep the shoreline stable to protect the beach.
